

COVID-19 DATA/SURVEILLANCE 2021 UPDATE:

**COVID-19 CASE DATA ARE PROVIDED HERE BY NUMBERS VACCINATED BY AGE & BY ETHNICITY
AND
FOR COVID-19 CASES AMONG CHILDREN IN 2020, IN 2021 AND IN JULY-AUGUST 2021**

**OFFICE OF EPIDEMIOLOGY AND RESEARCH & COVID-19 SURVEILLANCE UNIT
GUAM DEPARTMENT OF PUBLIC HEALTH AND SOCIAL SERVICES
9/8/2021**

Data are also available on the DPHSS COVID-19 DASHBOARD for the entire pandemic 2020-2021 to date,
and trends for the past two weeks: <https://dphss.guam.gov/covid-19/>

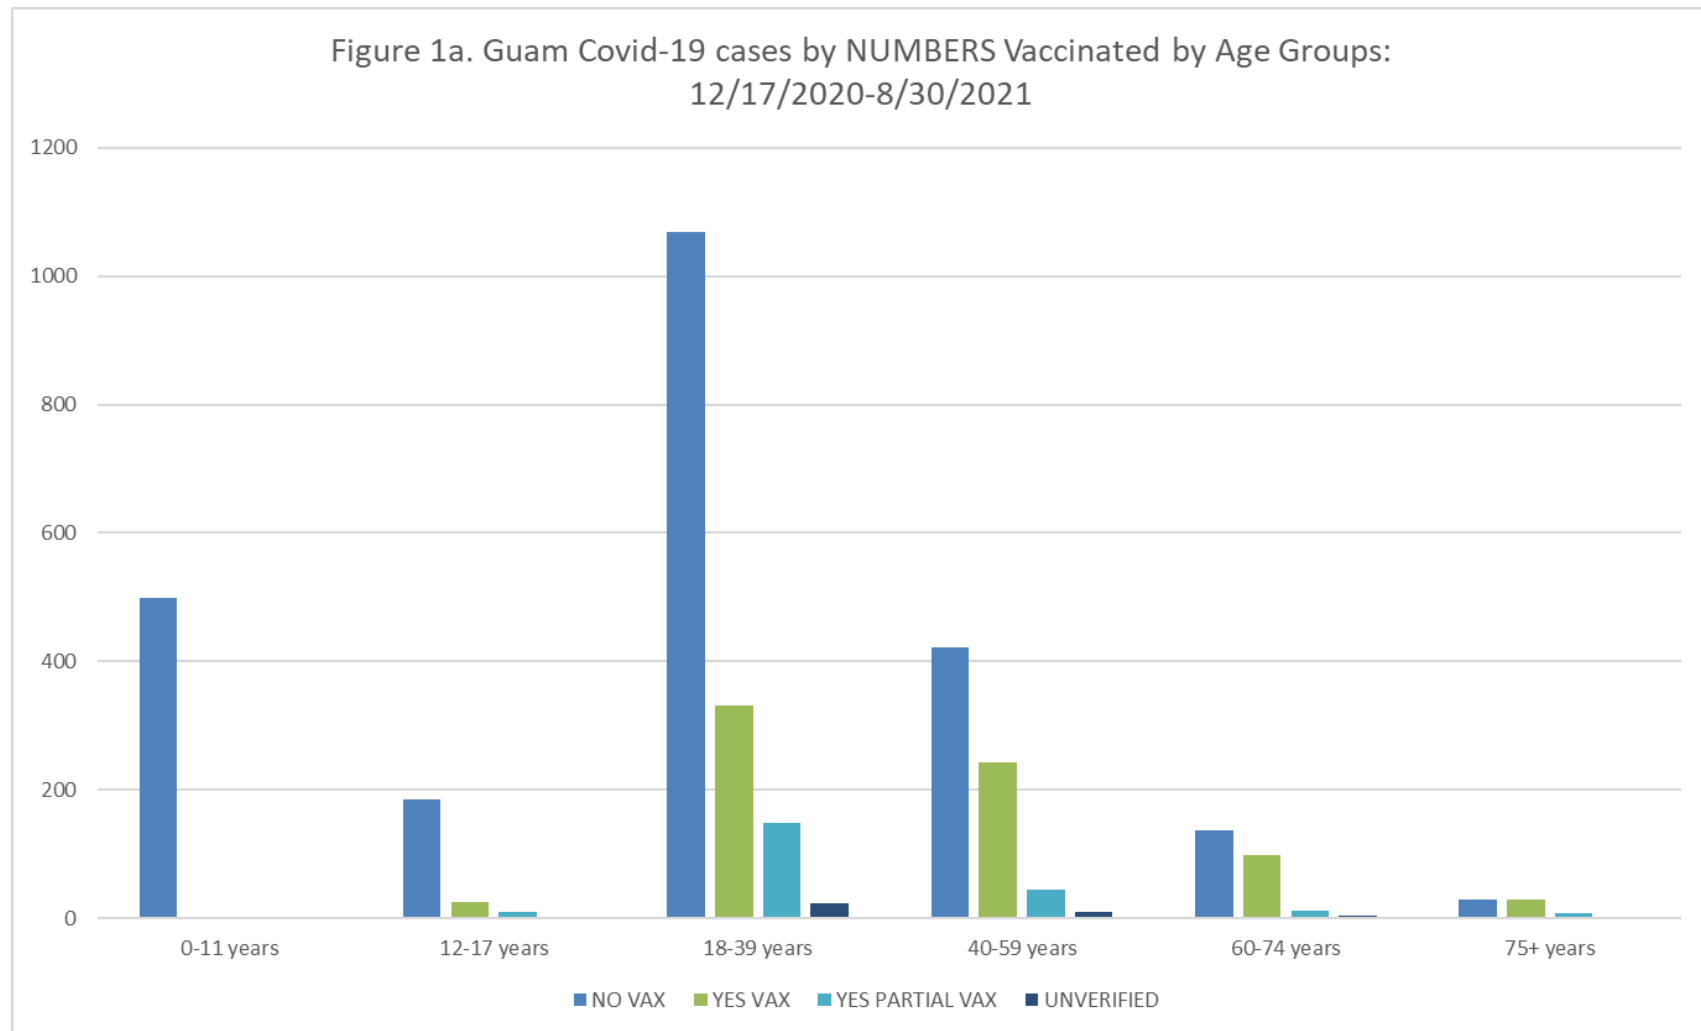

Figure 1a. shows the NUMBERS of COVID-19 cases who are unvaccinated since vaccinations began is much higher in younger age groups, particularly those aged 18-19 years. There are some “breakthrough” cases among vaccinated individuals who became infected, but these breakthrough cases are much lower in the older age groups, suggesting a protective effect of vaccination. Those 0-11 years are not eligible for vaccination.

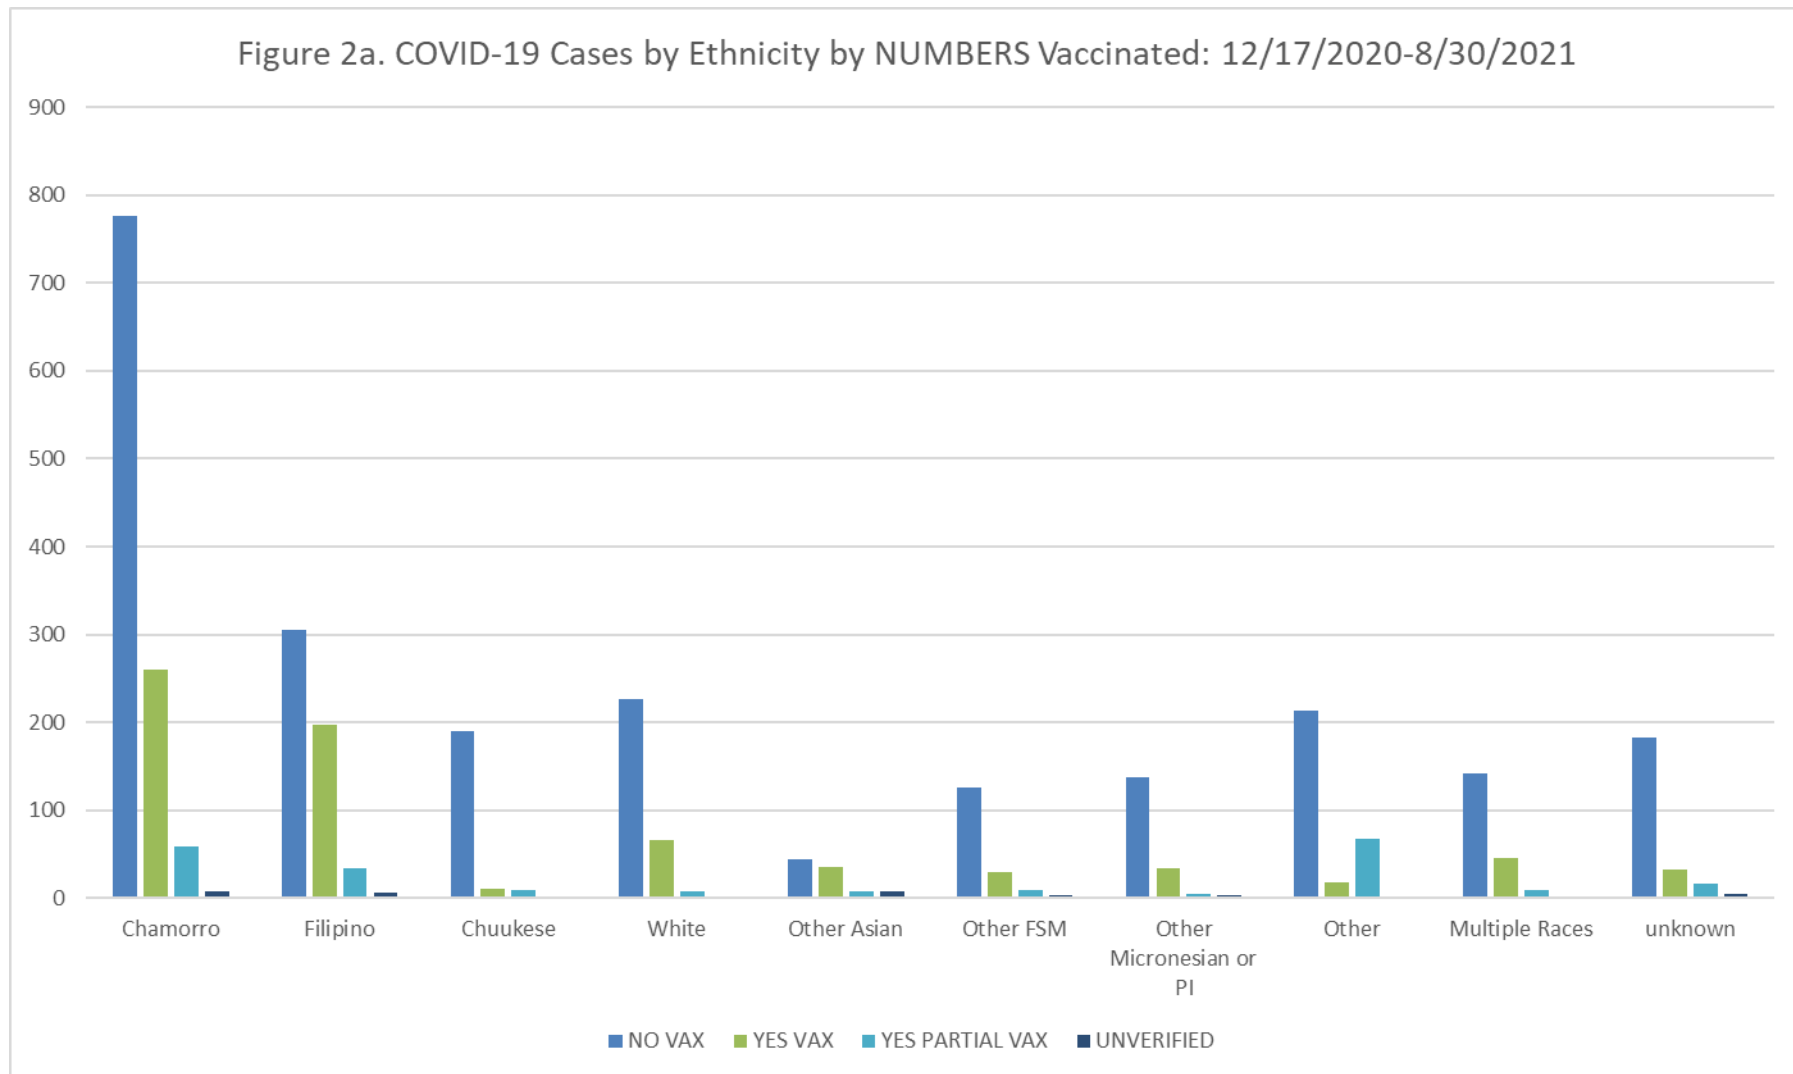

Figure 2a. shows the highest number of COVID-19 cases since vaccination began is among unvaccinated Chamorros.

This is followed by unvaccinated Filipinos, unvaccinated whites, unvaccinated Chuukese and unvaccinated Other ethnic groups.
