

## **COVID-19 DATA/SURVEILLANCE UPDATE**

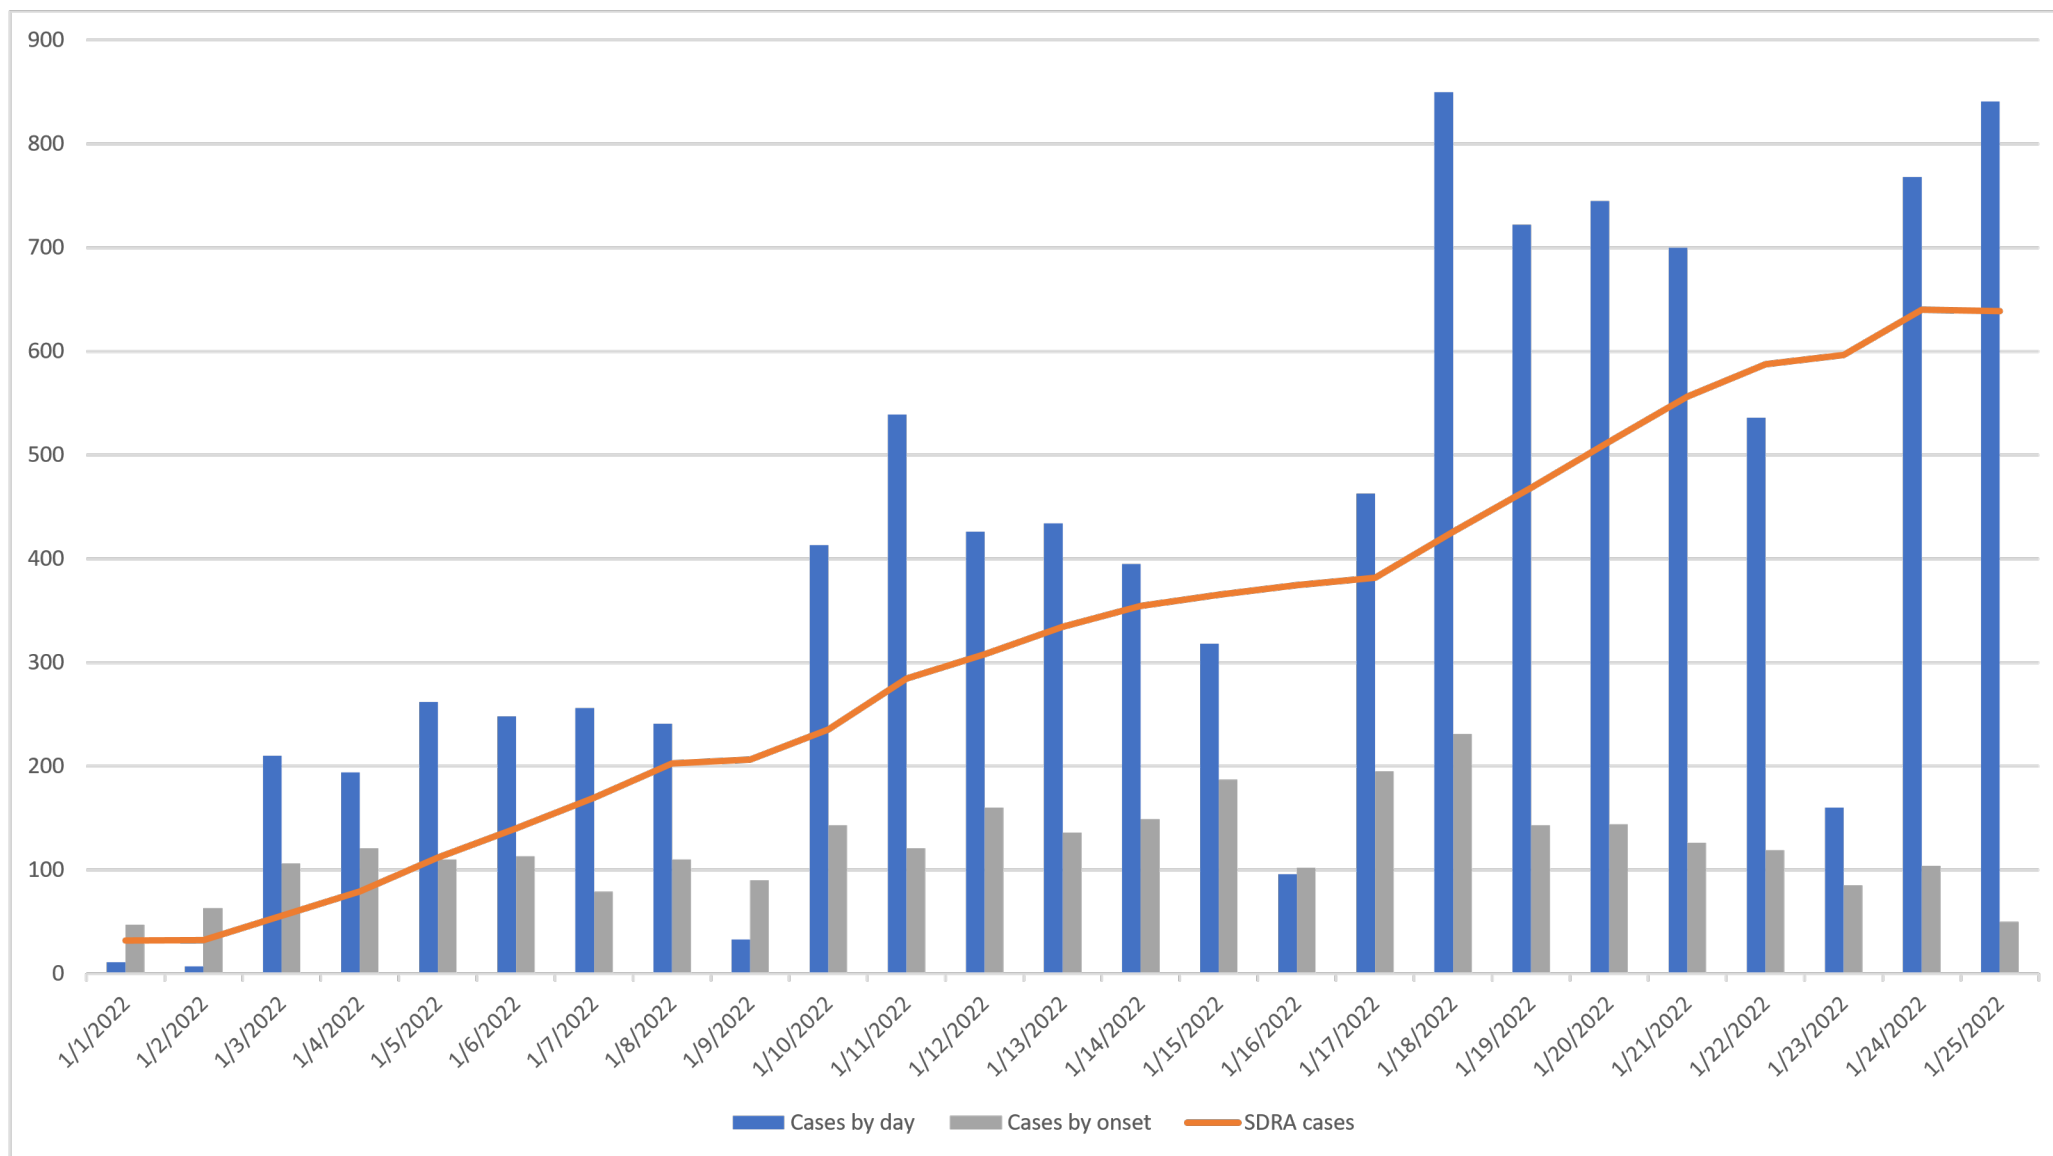

**TRENDS JANUARY 1- JANUARY 25, 2022**

**OFFICE OF EPIDEMIOLOGY AND RESEARCH & COVID-19 SURVEILLANCE UNIT  
GUAM DEPARTMENT OF PUBLIC HEALTH AND SOCIAL SERVICES**

**1/27/2022**

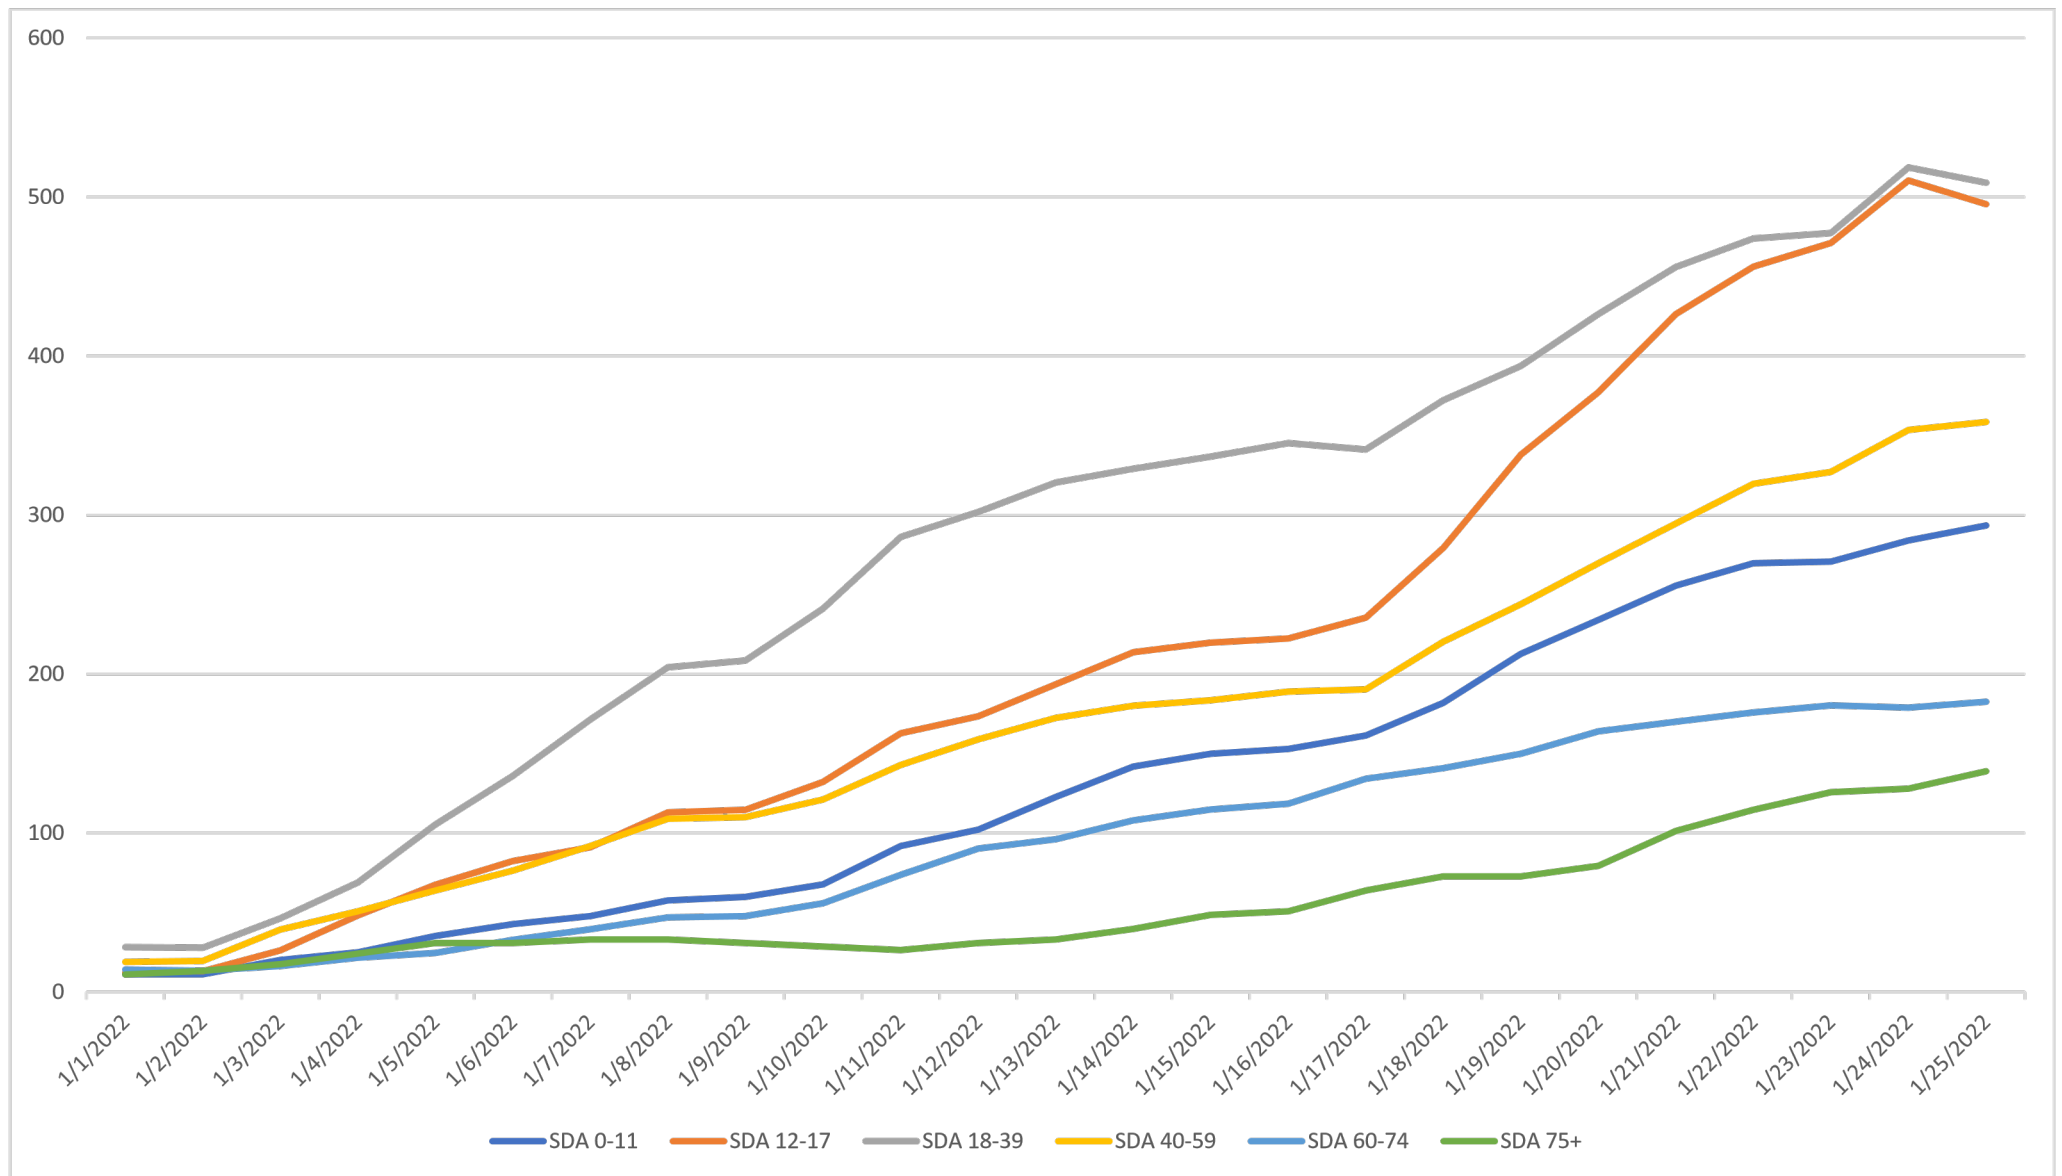

**The last day for “testing for any reason” was January 25<sup>th</sup>, which shows a high volume of testing at 2,700 tests per day.  
The average testing in the prior week was 2,280. This recent total on January 25<sup>th</sup> is more than twice what was observed on average during Delta Surge (Delta).  
The test positivity is now closer to 30% which is indicative of the Omicron Surge (Omicron).**

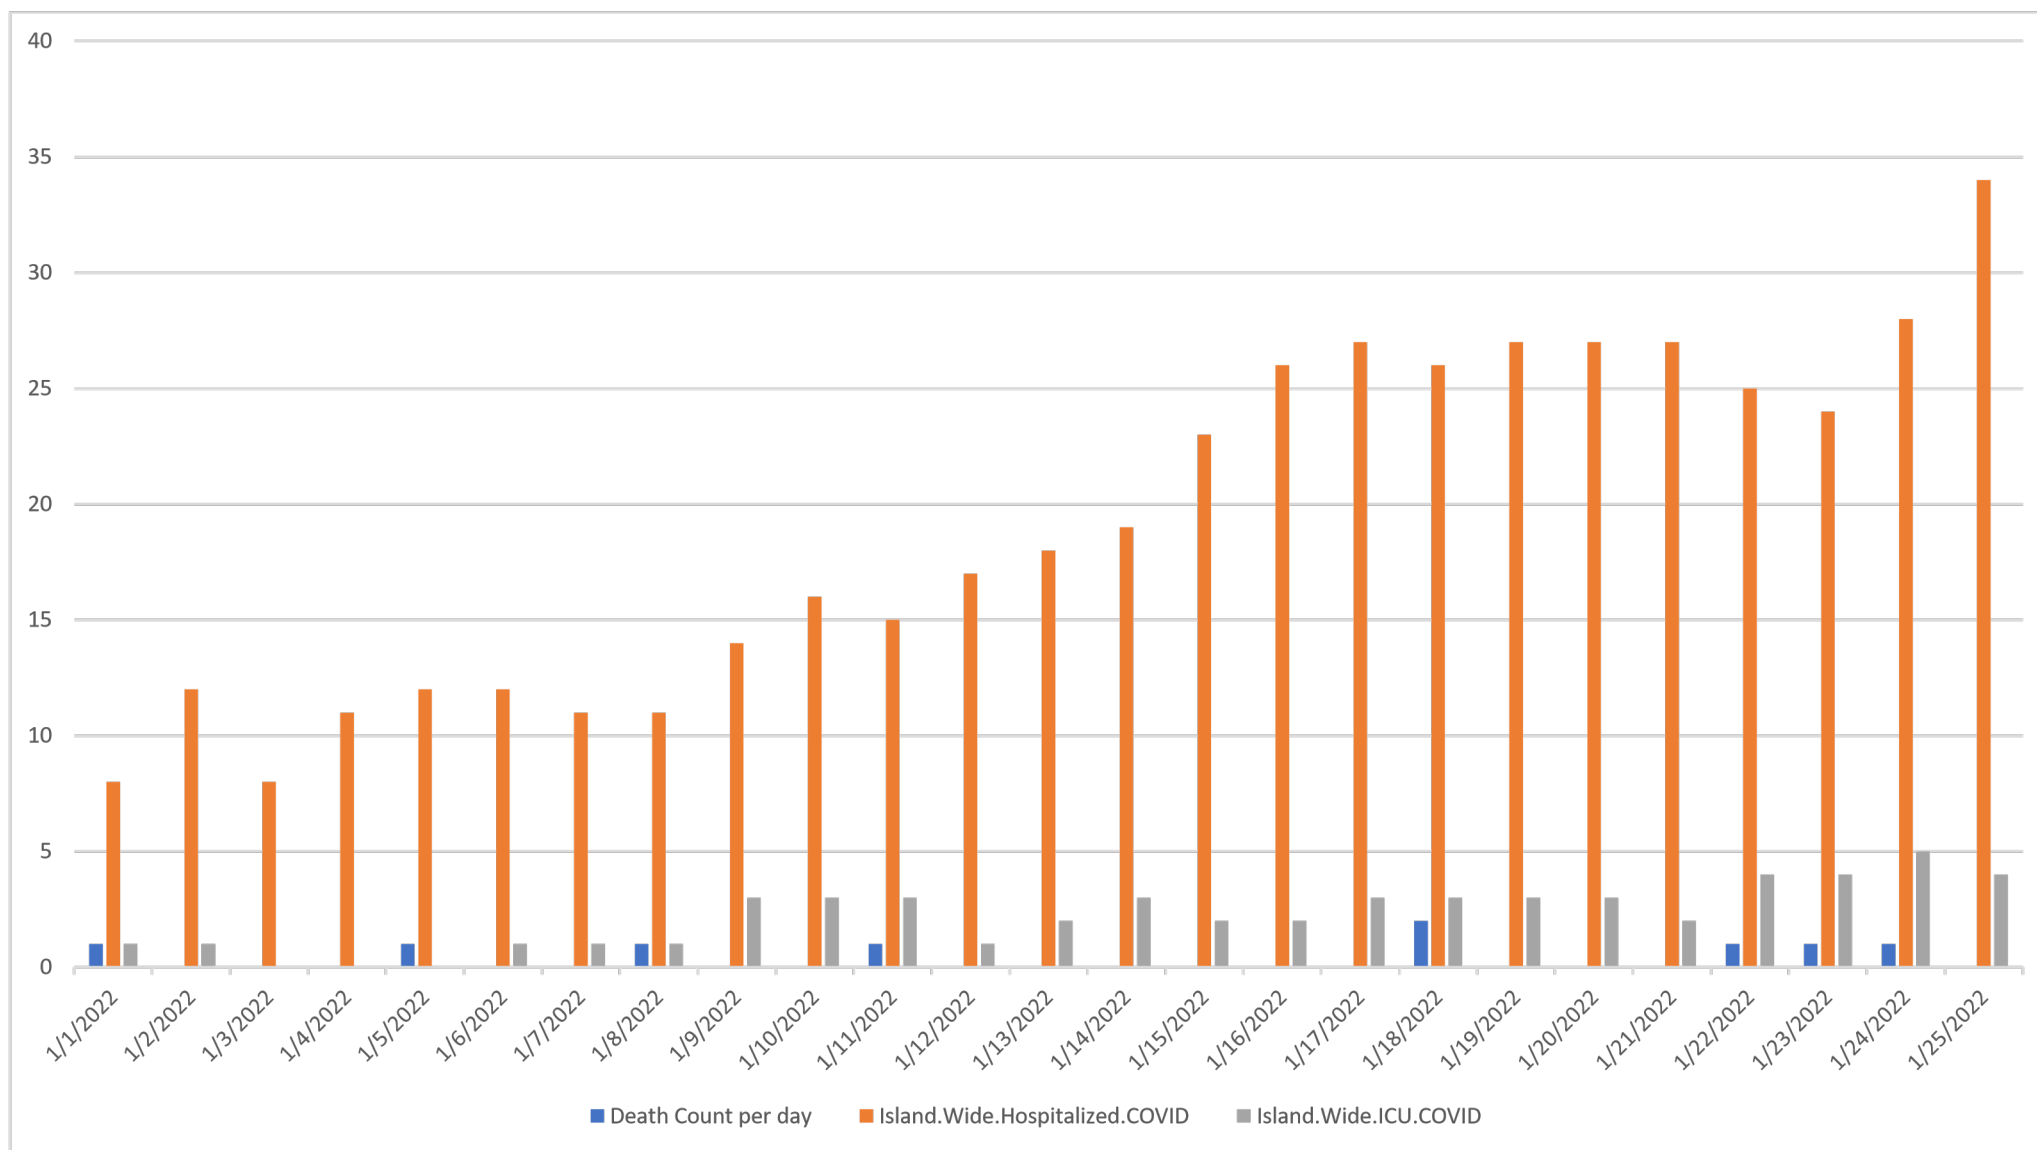

**The Seven-Day Rolling Average (SDRA) case rate has risen to almost to 650 cases per day during this latest surge.**

**Cases in blue are those cases that are reported by day, and added to the trend report, in gray, are symptomatic cases who reported a symptom onset date.**

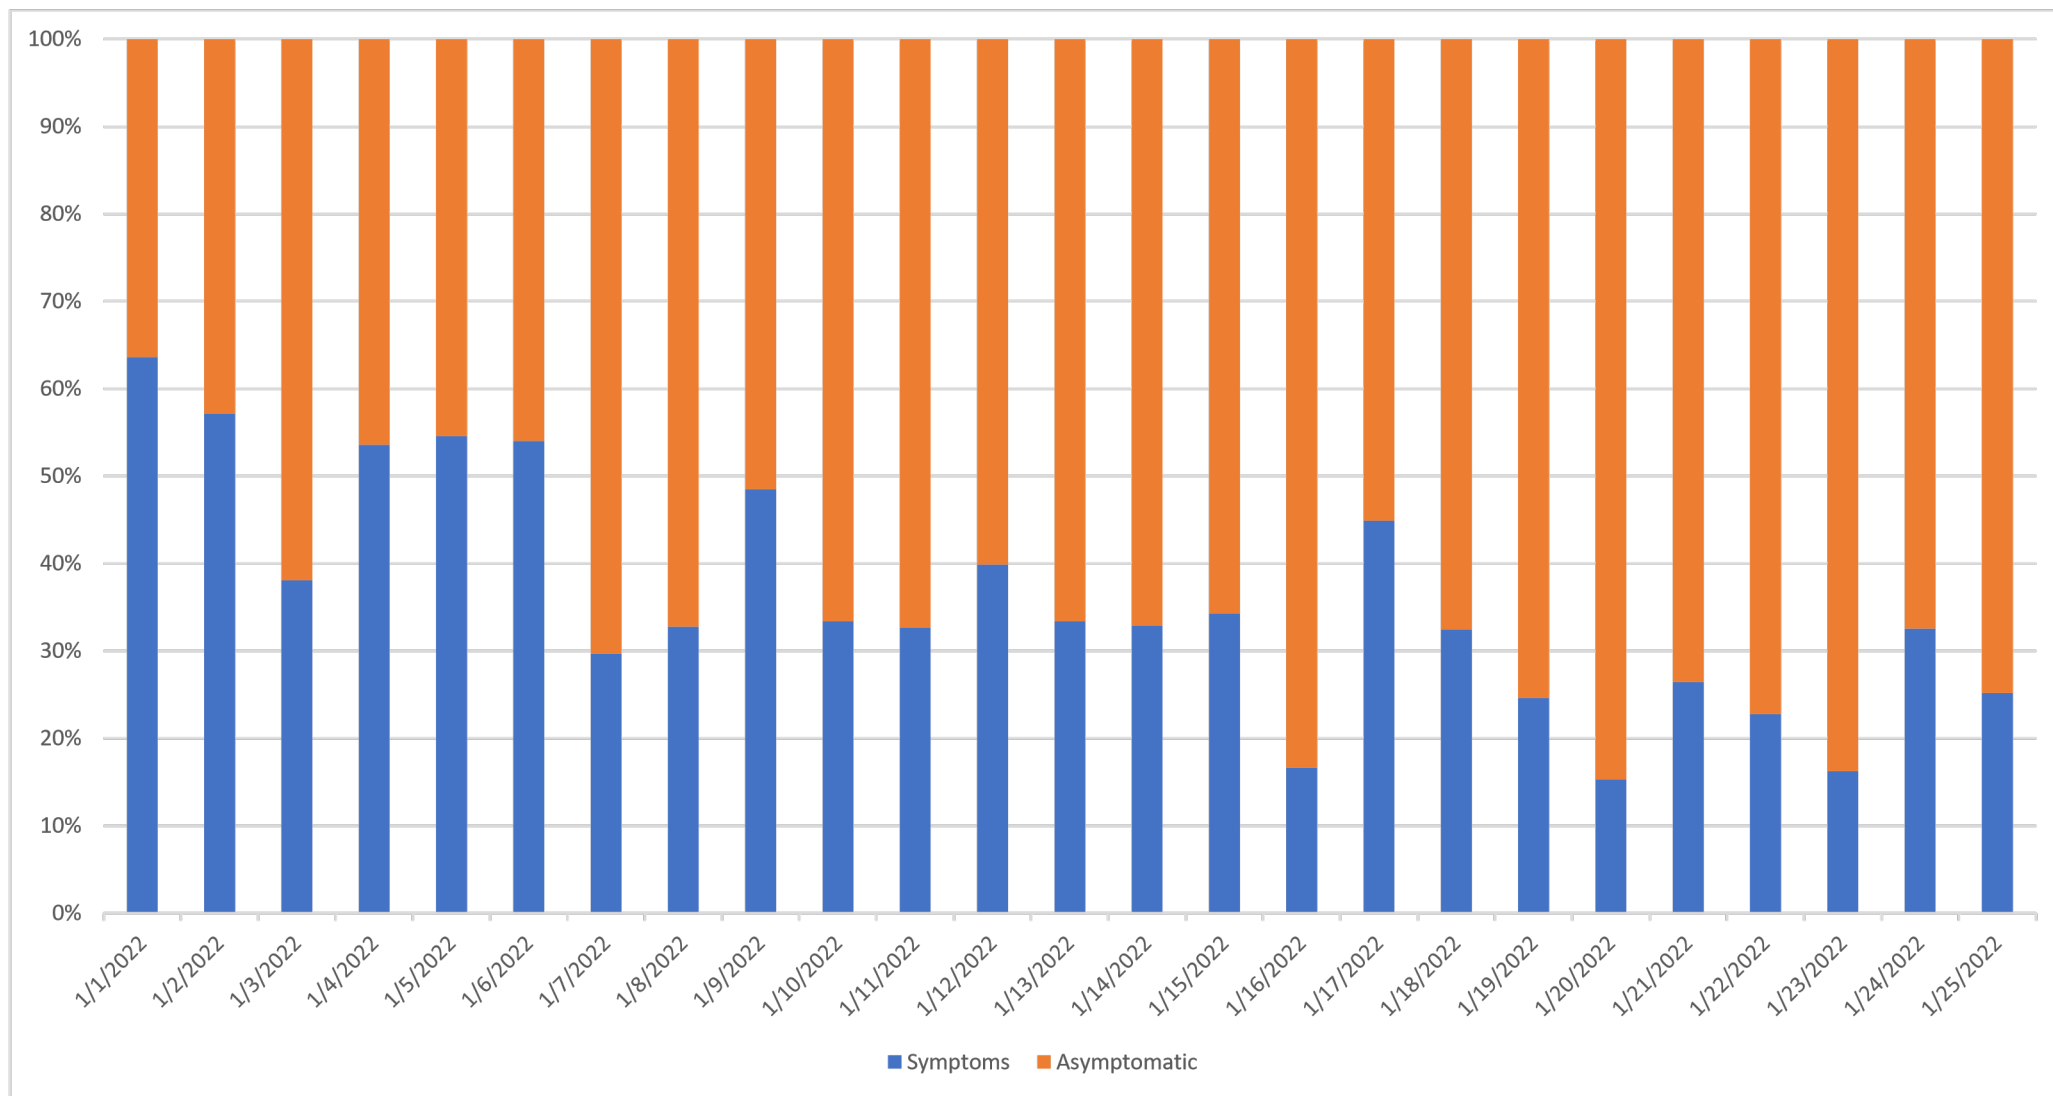

**Assessing cases by age groups, similar dynamics are observed now compared to the previous surge,  
with 18-39 years again leading. This is now followed by 12-17 years and 40-59 years,  
with ages 0-11 in the middle and older people >60 having the lowest numbers of cases..**

**As cases have increased during this surge, there is a subsequent increase in the hospital census.**

**Compared to the doubling rate of cases, we are NOT observing any increase of concern in the ICU's or in COVID-19 related deaths .**

**There is a continued decline in the proportion of cases with symptoms. This week is averaging closer to a quarter (25%) of cases being symptomatic.**

Data compiled by Vince Campo, CDC Foundation Surveillance Unit lead analyst. For more information,
